

MISSIYA 7 · BONUS

Teleskop

Haqiqiy teleskop yasab,
uzoqdagini yaqinlashtir.

🕒 25 daqiqa · 7–10 yosh

KERAKLI NARSALAR

2 trubka

2 lupa

Qaychi

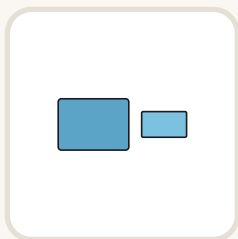

Skotch /
yelim

Qalamlar

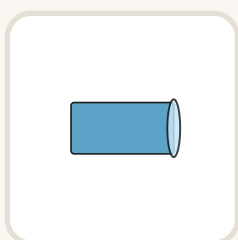

+ Varaq 3 (bezaklar)

BOSQICHLAR

1-bosqich

O'lchami har xil 2 ta trubka oling. Tor trubka keng trubkaga erkin kirishi kerak.

2-bosqich

Katta lupani keng trubka uchiga skotch bilan biriktiring — bu **obyektiv**.

3-bosqich

Kichik lupani tor trubka uchiga biriktiring — bu **okulyar**, ko'zingizni unga tirashasiz.

4-bosqich

Tor trubkani **linzasiz tomondan** keng trubkaga kiriting. Uni harakatlantirib aniqlikni rostlaysiz.

5-bosqich

Teleskopni **3-varaqdagi** bezaklar bilan bezating: yulduzlar, shkala, ism yorlig'i.

6-bosqich **KUZATING**

Uzoqdagi daraxt, oy yoki uy oynasiga qarang. Aniq ko'rinmaguncha tor trubkani harakatlantiring.

⚠ HECH QACHON QUYOSHGA QARAMANG

Lupa orqali quyosh nuri juda yorqin va ko'zlar uchun xavfli.

BILASIZMI?

1609-yilda Galiley ham xuddi sizdek — ikki linzadan birinchi teleskopini yasagan. Va u darhol Yupiterning 4 ta yo'ldoshi borligini kashf etgan. Undan oldin buni hech kim bilmasdi!

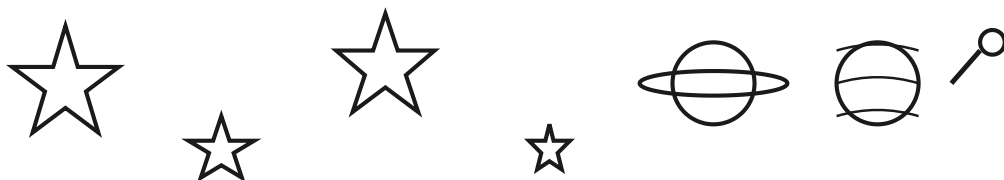

Men teleskopimni yasadim!

Bezaklar

MISSIYA 7

Bo'yang, qaychi bilan kesib, teleskopingizga yopishtiring.

YULDUZLAR VA SAYYORALAR

SHKALA — TRUBKA ATROFIGA O'RANG

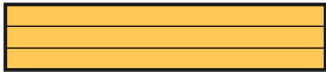

«TELESKOP [ISM]» YORLIG'I

TELESKOP

ismingizni yozing

OKULYAR UCHUN SARIQ TASMA

Tor trubka uchiga o'rang.

120–160 g/m² qog'ozda chop eting
