

MISSIYA 20 · BONUS

Galaktika

Galaktikani aylantir va
Quyoshimiz qayerda yashashini
top.

🕒 20 daqiqa · 7–10 yosh

KERAKLI NARSALAR

Oq karton A4

Qaychi

Yelim-qalam

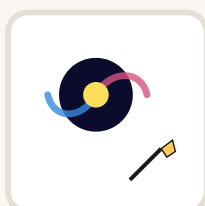

Qalamlar

Nina*

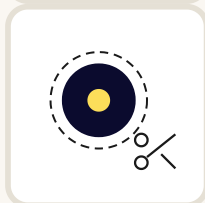

* 4-bosqichda (teshik) kattalar yordami kerak
+ Varaq 2 (galaktika) va Varaq 3 (detallar)

BOSQICHLAR

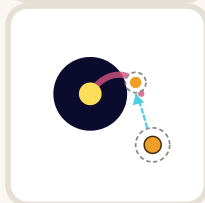

1-bosqich

Galaktikani **2-varaqda** bo'yang: yadroni sariq-oq, spiral tarmoqlarni ko'k, pushti va binafsha rangga.

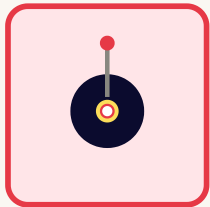

2-bosqich

Galaktikani **doira bo'ylab** — punktir chiziq bo'yicha kesib oling.

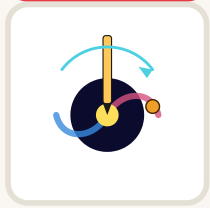

3-bosqich

3-varaqdan «**Quyosh**» belgisini kesib oling va tarmoqqa — ko'rsatilgan doiraga yopishtiring. Bu sizning galaktikadagi joyingiz.

4-bosqich **KATTALAR**

Kattalardan nina bilan disk **markaziga teshik** qilishni so'rang — qalamdan biroz kengroq.

5-bosqich

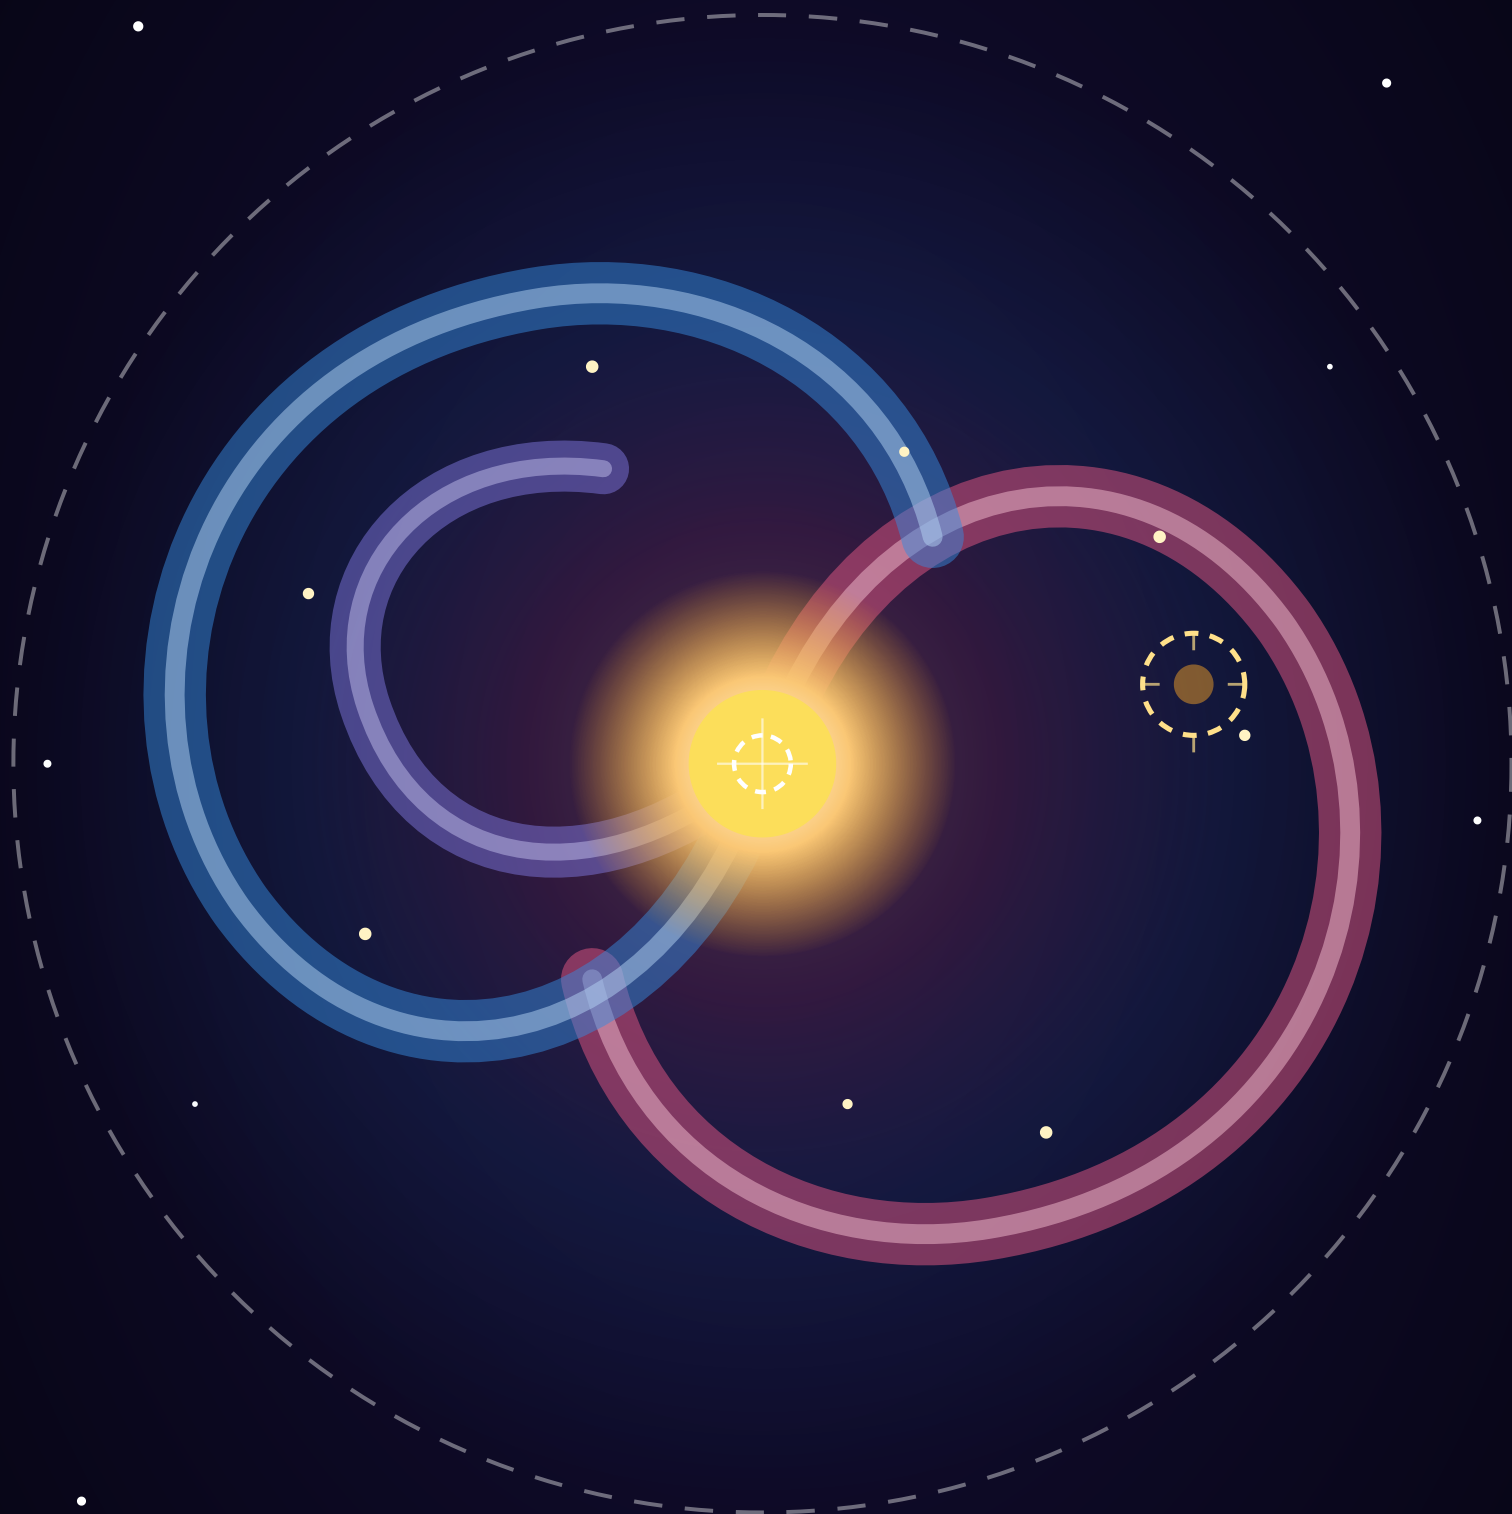

Qalamni teshikka tiqing, ushlab turing va galaktikani aylantiring. Quyosh yadro atrofida orbitada uchadi — xuddi biz kosmosda uchganimizdek!

BILASIZMI?

Quyosh galaktika markazini **~225-250 million yilda** bir marta aylanib chiqadi — bu bitta «galaktik yil». O'tgan safar biz shu yerda bo'lganimizda, Yerda dinozavrlar yashagan!

Men galaktikadagi joyimni topdim va uni aylantirdim!

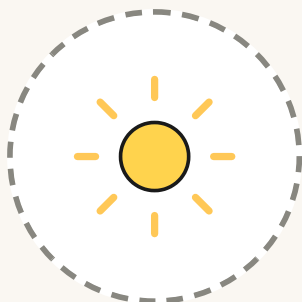

Doira bo'ylab kesing · markazda teshik · doira = Quyosh · STTM

Detallar va yig'ish

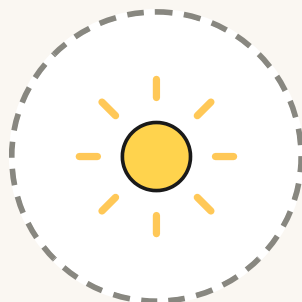

GALAKTIKA

Quyoshni kesib, tarmoqqa yopishtiring. Oddiy qalam — aylanish o'qi.

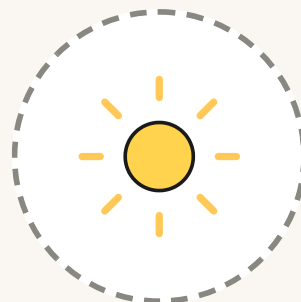

QUYOSH · SHU YERDASAN

GALAKTIKA YONDAN

Yondan galaktika yassi — xuddi quymoqdek. Shuning uchun osmonda biz tor yorug' yo'lakni — Somon yo'lini ko'ramiz.

Yig'ish: markazni nina bilan tesh → qalamni tiq → ushlab aylantir.
